Education

- Hochschule Bochum — B.Sc. Computer Science (3rd Semester)

 Sept 2025 – Present
- Heinz–Nixdorf Berufskolleg Essen — ITA (Information Technical Assistant, GPA: 1.5)

 Aug 2022 – July 2025
- Berufskolleg Essen West — Vocational Preparation

 Aug 2021 – July 2022
- Realschule am Schloss Borbeck Essen — Secondary School Certificate

 Aug 2014 – July 2021

Experience

Dataflow Security SpA — R&D Engineer (Software Developer)

 Apr 2026 – Sept 2026

    

- Built a local, Docker-based dev environment that mirrors production infrastructure 1:1, so features are validated against the real topology before they ship.
- Designed and shipped an internal project-management app in **Rust + React**, now the daily tool for a ~130-person R&D team.
- Wrote a local search engine over an internal Matrix-protocol comms system, composing several open-source Rust libraries into a single indexed query path.
- Designed the authentication layer for internal R&D services as a **Rust backend on AWS**, securing tooling for a government-facing cybersecurity provider.
- Researched running a Debian-based Linux distribution on Android as a field device.

HRTIME Software GmbH — Fullstack & DevOps (Working Student)

 Sept 2025 – Apr 2026

     

- Migrated a legacy **.NET 6 monolith** to **.NET 10 / Blazor Server** microservices serving thousands of users.
- Rebuilt the frontend as a reusable MudBlazor + Tailwind component architecture.
- Implemented cookie-based authentication with digital-signature capture and full DE/EN localization
- Owned the Windows Server / IIS layer: in-process hosting, SSL, and WebSockets/SignalR for real-time data.
- Tuned the hot path: Brotli/Gzip compression, static-asset caching, health checks, shipped via CI/CD.

GFOS Innovationsaward 2025 (2nd Place) — Frontend & Architecture

 Nov 2024 – Feb 2025

    

- Built a real-time sales dashboard (SPA) on SvelteKit + TypeScript, with a Java/PostgreSQL backend in Docker.
- Designed the data model and component architecture around a single typed source of truth, so the UI is a projection of state, not a copy of it.
- Wrote the technical documentation the team ships against.

Ruhrpottmetaller — Systems & Web Engineering

 Juli 2024

  

- Built the corporate site for a metal-recycling company: SvelteKit frontend tuned for load time and SEO.
- Wrote internal system tools in **Rust** (a custom CLI email client) to replace manual workflows.

GFOS Innovationsaward 2024 (1st Place) — Fullstack

 Nov 2023 – Feb 2024

    

- Built a digital attendance-tracking web app for schools: real-time tracking, class management, reporting.
- Designed mobile-first with accessibility as a hard constraint, not a polish pass.
- 1st place; covered by Radio Essen and GFOS.
